Abstract of FR2639325

This dosing bag is constituted by a film made of weldable flexible synthetic material shaped in the form of a sheath. It is closed at its opposite ends by two transverse straight welds 5, 6, connecting its two longitudinal sides 2, 4. The two faces 3 of the bag are also joined together via a curved transverse weld 7, having an unsymmetrical arrangement, which extends from a point 8 located on a longitudinal side 4 up towards a corner 11 of the bag located on the opposite side. The curved weld 7 defines an area empty of product, forming a gripping lug 12, as well as a pouring tip 13 intended to be cut off (along 14) when the bag is used. Application to the packaging of detergent products.
